## Western Reserve Controls introduces W5-ODK Operator Display and Keyboard

Western Reserve Controls announces the W5-ODK family of DeviceNet compatible operator displays, auxiliary I/O and keyboards.

The maximum configuration consists of:

- 8 – character 15 - segment LED display supporting user defined alpha/numeric messages
- 16 – lighted pushbuttons to select operator functions and to monitor event status.
- 24 digital inputs – 24 Vdc
- 24 digital outputs – 24 Vdc @ 0.5 amp

WRC products are manufactured in Akron, Ohio

- Support for a direct light-pole attachment and operation.
- Support for an adjustable volume audible alarm.
- Up to 2 – 240 Vac fused 3-amp outputs

Enclosure size is 6" wide x 8" long x 2 1/2" H, with external mounting tabs and powder coat finish.

Configuration in the field is supported by a separate control button used to scroll through menus to aid in the selection of various options. Field Configuration Options can be placed under password control if desired.

Field connections are provided by positive locking round connectors selected to match industry convention. Separate connectors are provided for:

- DeviceNet
- 24 Vdc power for auxiliary I/O
- 120/240 Vac power
- Auxiliary inputs

- Auxiliary outputs

Polled, Change of State, and Cyclic messages are supported.

W5-ODK can be used in a wide variety of applications ranging from Manufacturing Cells, material handling, tool and machinery controls, batch process stations. Process monitoring, access and security control.

Contact your WRC distributor or sales representative for assistance with an Operator Display and Keyboard for your application.
